

**BUCHANAN HOUSE
GLASGOW**

Buchanan House was extended and refurbished by a separate design team in works that completed 2002. That project was subject to dispute on suitability of the façade by the Landlord and Tenants.

10 storey , 250,000sqft, office
building Façade
replacement works.

CDA was introduced, as a direct client appointment to McLaughlin & Harvey to advise on replacing the façade and rectifying defects.

Rainscreen cladding and curtain walling

CDA was integral to the project, assisting stakeholders and MCLH by developing a phasing strategy allowing occupation during the works, co-ordinating new building envelope proposals including rainscreen detailing, composite cladding and curtain walling proposals and reviewing building fire compliance including revised fire-stopping, compartmentation strategy and details to prevent spread of fire to adjacent buildings.
